NEWSLETTER

Issue no. 40 - January / March 1995

Special Issue: 1995 Year of the Sea Turtle

Ban Turtle Sales now, or Pacific Will Lose Them Forever!

With a call to end all commercial trade in turtles and their products, the 1995 Year of the Sea Turtle began throughout the Pacific islands in the first week of March. At the regional launch of the initiative, SPREP's Director, Dr Vili Fuavao, emphasised that the Year of the Sea Turtle was a new way for SPREP and its member countries to work together on a conservation issue - by campaigning.

Launching the Campaign

"The 'Let Our Turtle Family Live!' campaign has the endorsement of Pacific Heads of Government, which gives the Year of the Sea Turtle the highest level of support possible. The slogan encapsulates the need for the Pacific to work together as a family of nations to ensure the survival of turtles which migrate throughout the region, " said Dr Fuavao at the launch in Apia.

School children joined government agencies and NGOs, donor organisations, the media and SPREP to launch the regional campaign at SPREP's offices in Apia. Sue Miller, SPREP's turtle campaign co-ordinator, underlined the region-wide declines in turtle breeding populations. She also pointed out that "turtles are a 'flagship' species for our marine environment. Thus, their decline gives strong signals that we are not taking care of this environment, which has serious implications for our own survival."

"All six species of sea turtle are endangered in the South Pacific", said Ms Miller. "If threats to them do not cease it is highly likely that many of their populations will become extinct. Sea turtles are an important part of Pacific cultures and identity. If they are lost, Pacific peoples will lose part of themselves", said Ms Miller.

A key action and focus for the launch and during the campaign is for Pacific island countries to develop enforceable bans on the commercial trade in turtles and their products. This focuses on domestic - or in-country - and international - such as tourist - trade in turtles. Fewer catches for subsistence and traditional needs are also strongly encouraged.

This point was superbly demonstrated during the Solomon Island's campaign launch when the Minister for Forests, Environment and Conservation, Hon, Allan Kemakeca affirmed that traditional aspirations of nature conservation were more important than economic development for turtle resources. He also said that maintaining turtle subsistence takes for turtle were important but only "as long as our laws and regulations are adhered to, and if our subsistence harvests do not endanger our turtle population any further".

National Campaigns

National campaigns were launched in American Samoa, Cook Islands, Fiji, New Caledonia, New Zealand, PNG, Solomon Islands, Tonga, Vanuatu and Western Samoa during March. Other participating countries plan launches later in the year as part of events dedicated to conserving sea turtles.

Launches around the region received excellent media coverage in TV, radio, newspapers and magazines throughout the region and the

1995 year of the fea turtle

Let Our Turtle Family Live! is the message for the 1995 Year of the Sea Turtle campaign. Posters, fact sheets and bumper stickers (left) are available from national turtle focal points.

Ban Turtle Sales now, or We Will Lose Them Forever!

Let our turtle family Live!

page 1

world. This has generated much interest in the campaign and in conserving sea turtle.

The recent ban in Fiji on commercial trading in turtles is already a good example of an effective national campaign. In honour of the Year of the Sea Turtle, the Fiji government announced a year-long ban on the commercial take of sea turtles, with the Cabinet decision able to extend the ban after one year. Fiji's news received wide media coverage, including BBC World Service.

SPREP has called on other Pacific nations to follow Fiji's lead.

The Campaign Plan

Regional work for the Year of the Sea Turtle is co-ordinated by SPREP, which has produced a campaign plan based on the expressed desires of the Regional Marine Turtle Conservation Programme network. In each of the 27 participating countries, complementary national campaign plans and activities have been developed to take the turtle conservation message to targeted key audiences. Special campaign artwork, based on turtles drawn by children in last year's regional turtle art competition, was produced by SPREP.

A video highlighting key aspects of turtle conservation has also been produced for use in schools, village meetings and TV broadcasts. TVNZ Pacific Service has already agreed to air the video as part of its programming to eight Pacific nations.

Campaign Activities

Many varied activities are planned in countries and the region to ensure sustained momentum on the need to conserve turtles. These include:

- a four-month mini-campaign aimed at reducing the tourist trade in turtle products, for the Pacific's peak tourist season;
- a TV advertisement, now in pro-
- ⇒ a regional competition to guess where satellite-tagged turtles migrate, in October;
- ⇒ a promotion of opportunities for 'turtle-watching' ecotourism, in November.
- ➡ a module on turtle conservation in all SPREP's Teacher Training and Community Development Workshops held during 1995, which includes the issues, the need and what people can do; and,
- a turtle rap song and music video aimed at younger audiences.

The media is a key target to enable the turtle conservation message to be spread widely - and at low cost! The response to date from the media to this campaign has been overwhelming. The January issue of Islands Business Pacific - one of the region's pre-eminent business magazines - profiled the turtle conservation issue with a 6-page feature spread. Islands Business then donated fifty copies of this issue to distribute to the turtle network. An ITN TV News feature story on the Year of the Sea Turtle went worldwide and throughout the region on ITN, CNN, Channel 9 (Australia) and TV NZ and TV3 (New Zealand).

Newspaper and radio coverage has been equally successful. An article in *The Times* (London, UK) was then reprinted by newspapers all over the world, including the Seychelles *National* newspaper!

Radio Australia's One World regional environment program is another successful way to spread the message, with two features already covered in 1995, and further stories planned. Items on the BBC World Service and "Voice of America" are two more examples of the campaign's coverage to date which also reaches a wide range of Pacific audiences.

Media coverage is extremely effective in getting the message spread throughout the region. To this end, information on "Developing Relations with the Media" was specifically included in the regional campaign plan sent to the RMTCP network.

Working with NGOs

Developing networks with NGOs is another effective way of working on the Year of the Sea Turtle. There have been very positive responses from the region's NGOs, particularly in joint activities with govern-

The media are vital for any campaign - this *Televise Samoa* crew was on hand to televise the release of a Hawksbill turtle in Western Samoa in 1994.

page 4 *

From the Director's Desk.

W elcome to this special issue of SPREP's Environment Newsletter announcing the regional launch of the 1995 Year of the Sea Turtle campaign. This is a significant moment for SPREP, because it. embodies a new way for SPREP and its member governments to work on conservation issues - we are campaigning.

The regional launch of the Year of the Sea Turtle commenced in New Zealand with the Hon. Denis Marshall, New Zealand's Minister of Conservation, leading the occasion, followed closely in the Kingdom of Tonga by the Acting Prime Minister, and throughout the Pacific islands in Fiji, Solomon Islands, Vanuatu and many others.

The high level of political support for these launches is due to the campaign's endorsement by all Heads of Government in the Pacific islands - by Forum Leaders and by members of the South Pacific Commission. Their concern recognises the urgent need to conserve sea turtles in the region.

Why sea turtles? Unfortunately, that is an easy question to answer.

All six species of sea turtle are endangered in this region - if threats to them do not decrease it is highly likely that many populations will become extinct.

Sea turtles are important in Pacific cultures and indeed our identity. If we lose these unique sea creatures we lose part of ourselves.

The costs are even higher, for sea turtles are but one group of animals

in our seas. These long-lived, highly migratory animals are a "flagship species" for our marine environment. Their decline gives strong signals that we are not taking care of this environment. This has serious implications for our own survival

For over five years now, SPREP has co-ordinated the Regional Marine Turtle Conservation Programme. We have seen interest grow such that today there are nineteen

Why sea turtles? Unfortunately, that is an easy question to answer.

active nations in the programme.

-To date, turtle research, tagging and monitoring projects have all been key activities. Many of these projects have indicated a massive decline in nesting turtles. Education and awareness material have also been developed.

In 1993, however, the Turtle Programme recognised that it had to do more to get the conservation message out. We have been preparing for the 1995 Year of the Sea Turtle since then.

Last year I sat in a meeting hearing turtle managers and scientists talk in what I thought was the quite peculiar language of slogans, key messages, target audiences and so on. I think that they had some fun with it, and you will see the results in events that will take place throughout the region over the coming year,

> Dr Vili Fuavao, Director of SPREP (right) addressed media, government officials and school children at the regional launch of the campaign. Ms Sue Miller, Turtle Campaign Coordinator (centre) and Mrs Gisa Gaufa Salesa, Programme Officer (Education), also spoke to the full conference room at SPREP Headquarters.

Photo: SPREP

The campaign slogan - "Let our Turtle Family Live!" - was carefully thought out. It emphasises that to conserve these resources for our children means we must work together as a family of nations. This is because turtles migrate around

> our shared seas, feeding and breeding in different countries.

> It is important to realise that this is an active, region-wide turtle conservation network -

not just a SPREP initiative. Government agencies and NGOs are all working together on this issue - scientists, managers, teachers, conservationists and politicians.

We hope to communicate to all in the region that unless we conserve turtles now we will lose them forever. To get this message out to cities, towns and villages in the region is a big task, and hundreds of people will work in many ways to achieve this.

One key action of the campaign is to end commercial trade in turtles. It is simply not sustainable. By ending commercial trade - domestic and international - we can secure turtle resources for generations to come, so that they may also use turtles for traditional and subsistence purposes.

I ask that you all help in this task.

I thank all who are working to make the Year of the Sea Turtle the success it must be, for the sake of these precious animals. To those who receive this message, remember that 1995 is the year that we have dedicated ourselves to conserving the sea turtle. Please contribute positively to this worthwhile campaign.

Ed.: This article was taken from Dr Fuavao's speech on 6 March for the regional launch the 1995 Year of the Sea Türtle, at SPREP Headquarters in Apia, Western Samoa.

Fiji Takes Lead in Battle to Save Sea Turtles

F iji recently made a crucial decision for the survival of sea turtles by announcing a ban on the sale of turtles and their products. This is Fiji's, and the region's, first major step for the 1995 Year of the Sea Turtle campaign.

"This is a major victory for turtle conservation, and a great way to kick off the 'Year of the Sea Turtle'", said Dr. Vili A. Fuavao, SPREP's Director. "This year-long ban has the potential to be turned into a permanent ban, thus helping to secure the future of turtle resources in the Pacific region", he said.

One key target for the Year of the Sea Turtle is to encourage countries to ban commercial sales of turtles and their products to reduce harvest pressure on these slow breeding creatures.

"If the numbers of turtles killed does not drastically decrease in this region we are facing extinction of our turtle resources" said Sue Miller, SPREP's Turtle Campaign Coordinator.

"SPREP is advising all nations in the region to follow Fiji's lead and work towards a permanent ban on the sale of turtles and their products in their respective countries and internationally", said Ms Miller.

"Turtle resources in the South Pacific cannot sustain commercial harvest, and if we are to maintain turtle resources for ceremonial and subsistence purposes the sales of turtles for money will have to stop now. If we lose turtles from the Pacific we will all lose an important part of Pacific cultures and a way of life", she continued.

Fiji is part of SPREP's Regional Marine Turtle Conservation Programme. Fifteen Pacific island countries are working together in this programme to conserve turtles. This co-operation is vital as turtle migrate vast distances around the region to breed and feed.

989

Ban Turtle Sales now, or Pacific Will Lose Them Forever!

☞ page 2

ment agencies, as in Fiji between the Ministry of Fisheries and AHI-Fiji (Action Humanitarian Internationale). Other NGOs active in the Year of the Sea Turtle include SPACHEE, Greenpeace (New Zealand and South Pacific), O le Siosiomaga Society (Western Samoa), TNC (The Nature Conservancy - Pacific Programme), the Hiti Tau network (French Polynesia) and the Honu Project (Hawaii, USA).

The "Let Our Turtle Family Live!" campaign for the Year of the Sea Turtle is already achieving measurable results for conserving these threatened species. SPREP is encouraging active participation by government and non government agencies, including people from education, media, research and management.

Ed.: If you would like more information on the campaign or see a way for you or your group to become actively involved please contact Sue Miller, Turtle Campaign Coordinator at SPREP.

SPREP's Turtle Art Competition - 'Great Success'

O ver 1600 children from eighteen Pacific island countries entered the art competition on sea turtles, the first major regional event for the 1995 Year of the Sea Turtle.

Sue Miller, Species Conservation Officer for SPREP, said that "SPREP was overwhelmed with the response to the competition. The quality of the artwork was incredible, and it illustrated the creative talent of children in the Pacific islands."

In the competition children drew turtle pictures to support the campaign's theme, "Let Our Turtle Family Live!". SPREP has used the artwork to develop posters and stickers for the region-wide turtle awareness and education campaign.

The winners of the art competition were:

O Faaeaina Iakopo (aged 8) from Robert Louis Stevenson School in Apia, Western Samoa, who re- ceived the first prize of US\$ 250;

- Mouauri Trego (Year 6) from Aroroangi School, Rarotonga, Cook Islands (second prize: US\$ 100); and,
- Nalapati Alalatoa (aged 18) from Tuasivi College, Savai'i, Western Samoa (third prize: US\$ 50).

Ms Miller said that the competition was very difficult to judge given the high quality of entries, but that the final winners were selected because their entries best reflected the campaign theme.

These and other artwork received in the competition have been used for a series of posters, T-shirt designs and stickers, which are now available around the region and from SPREP.

Ed.: For more information, contact

Ms Sue Miller, Turtle Campaign Coordinator, at SPREP.

Niue:

Village Competition Raises Environmental Awareness

N amukulu village on Niue carried off a NZ\$600 first prize for a village beautification competition held late in 1994.

In a small, UNDP-funded and SPREP-supported project, the Niue Tourism Association organised a village competition to clean up Niue generally, and more particularly near scenic tourist sites, tourism accommodation, and along recently sealed roadsides from Avatele to Hikutavake villages.

Litter and Tourism

The competition was used to increase community awareness of the solid waste problem in Niue, particularly around village areas, and the importance of this for Niue's growing tourism industry. The Tourism Association is keen to promote Niue as a "clean, green and beautiful" destination for overseas visitors.

In a small country such as Niue, community activities such as village competitions are very effective, particularly where prizes encourage community participation.

Below: The view from the lookout to the Topaka Resort fale and the coast.

Various groups participated in the project, including government agencies, village councils, youth associations, the Tourism Office and the New Zealand High Commission.

Tourists Welcome New Shelter

In an associated project, a traditional Niuean house - or fale - was built as part of the Topaka Resort at Hikutavake village. The new facility was opened by the Acting Minster for Tourism, Hon. Jack Willie Lipitoa, on 5 October 1994.

Tourists can now use the fale as a rest place when climbing to the nearby lookout, which has a magnificent view of the natural surroundings and villages in the area. The lookout also overlooks the culturally significant Matapa Chasm, which was a swimming place for the chiefs of old.

A track was cleared to the top of the mountain, with the fale built on flat ground near the top. This facility and the surrounding area are managed by local landowners, with assistance from the Niue Tourism Office and the Niue Tourism Association.

Acting Minister Tourism and Community Affairs, Hon. Jack Lipitoa, opens the track to the Topaka Resort fale.

Photo: Herman Tagaloailuga

The whole project was funded through SPREP's now completed PMI Project, which provided funds and technical assistance for smallscale environmental activities.

Ed.: Thanks go to the Niue Tourism Association and the Environment Unit, Department of Community Affairs, for providing the information and photos on the project.

Environment news for the Pacific islands

New Cyclone Radar Commissioned

A new radar system at Nausori Airport, Fiji, will provide early warnings for tropical cyclones for Fiji and immediate neighbours.

Commissioned on 25 October 1994 in time for the upcoming cyclone season, the system was funded by the Fiji government and AIDAB. The new radar compliments a similar system at Nadi Airport in the west of Fiji.

Australia-South Pacific Newsletter, 1/11/94.

New Project Addresses Climate Change in the Pacific

Neville Koop Meteorology / Climatology Officer

A new US\$1-million, 3-year research project will investigate the amount of heat in the atmosphere to help predict changes in this region's and the world's climate.

The Atmospheric Radiation Measurement (ARM) project is major part of a *US Department of Energy* research strategy to improve the understanding of global climate change.

Improving Predictions

Recent studies now permit scientists to better understand the climate of the Pacific islands. While there is still much more to be discovered, it is well known that the warm ocean waters of the Western Pacific Ocean are also very important to the world's climate.

Better understanding of the mechanics of processes of the oceans and the atmosphere allows researchers to build computer models which can predict future climate scenarios. These models will help governments to develop strategies to respond and adapt to various possible climate regimes in the future.

Poor knowledge of the processes involved in atmospheric re-radiation is the major hurdle in improving these computer models. Re-radiation is the way in-coming radiation from the sun is absorbed, reflected or weakened by the earth and the atmosphere (see diagram).

The ARM Project

There are presently three sites being considered for monitoring atmospheric solar radiation in the tropical Pacific Ocean. The first station will installed on Manus Island, PNG, in August 1995, and the second station will be built on Nauru or Tarawa, Kiribati, early in 1996. A third site will be considered later, possibly on Kanton Island or Christmas Island, also in Kiribati.

In an agreement signed in December 1994, SPREP and the US Los Alamos National Laboratory will collaborate on this important project. Los Alamos will be responsible for installing and maintaining the atmospheric monitoring stations - or Atmospheric and Radiation Cloud Stations (ARCSs).

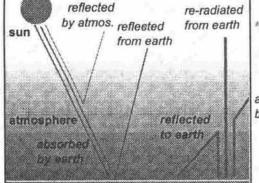

Information from the ARCS will be available locally before being transmitted each month to Los Alamos in USA.

SPREP's Role in ARM

SPREP's role will be to:

- identify suitable sites; obtain permission, contracts and agreements with national governments for siting and operating ARCS; and assist in installing and operating ARCS.
- establish and conduct local public relations and public awareness programmes, by developing and distributing fact sheets, video, television and radio materials in local languages.
- establish and run local and regional school education programmes, conducting workshops, and producing and distributing educational materials to schools.
- ensure that the establishment and operation of ARCS comply with local environment, safety and health requirements and regulations.
- help local staff interpret data collected by the local ARCS.
- work with relevant regional agencies and institutions wanting to collaborate with the project, and identify those that may also be interested in the data collected, possibly helping with data distribution to these agencies.

page 5 🖝

absorbed by atmos. Figure: Radiation in the earth's atmosphere

This figure shows what happens to short wave - or ultra-violet - energy from the sun when it reaches the earth and its atmosphere. Some radiation is reflected by the atmosphere and the clouds in it, while the rest passes through the atmosphere to the ground, where it is absorbed by the earth's surface.

When any object absorbs energy, it heats up and then will give off long wave or infra-red - radiation. Unlike short wave radiation, some long wave radiation is absorbed by the atmosphere, and is re-radiated back to the earth's surface.

The ARM Project aims to discover the amounts of various radiations involved, and so determine exactly how much energy is entering and leaving the atmosphere.

Clouds complicate this research, as they change the movement of short and long wave radiation through the atmosphere. Since the amounts and types of clouds are constantly changing, at least ten years of information is needed to find the impact of seasonal and annual changes in atmospheric radiation.

oastt.

First Climate Change Conference Meets in Germany

T he German government will host the first Conference of Parties (COP) for the *United Nations Framework Convention on Climate Change* in Berlin on 28 March - 7 April 1995.

The Convention calls for reductions in emissions of greenhouse gases (GHGs - such as carbon dioxide, methane and nitrous oxide) to levels that will allow ecosystems to adapt to global warming.

The first COP follows eleven sessions of the International Negotiating Committee (INC) which established the details for implementing the Convention. The last session, INC XI, concluded in New York on 17 February. Pacific island countries were active in the negotiating sessions - individually, as a region, and as part of the Alliance of Small Island States (AOSIS).

A draft protocol to the Convention was submitted by AOSIS to INC-XI that might be considered at the first COP. The protocol aims to set maximum amounts and timetables for reducing GHGs, and specifically calls for reductions in carbon dioxide emissions to 20 per cent below 1990-levels by 2005.

This protocol and other amendments could be the topic for heated debate during the COP, with many developed and so-called "transition" countries opposed to such rigid conditions for reducing GHGs.

New Project Addresses Climate Change

☞ page 4

SPREP will also provide appropriate representatives for project planning meetings and the ARM Science Team Meetings.

Ed.: For more information, contact
Neville Koop, SPREP's Meteorology /
Climatology Officer, or Chalapan
Kaluwin, Climate Change Officer at,
SPREP.

Many Pacific island countries support the protocol, seeing these reductions as critical in limiting and mitigating the impacts of climate change to the region.

The COP will consist of two meetings: a technical session (28 March-4 April) followed by a ministerial-level meeting (5-7 April). Neville Koop, SPREP's Meteorology and Climatology Officer, will provide technical assistance to SPREP member countries during the meeting.

The Climate Change Convention was signed by over 150 countries at the Earth Summit in Rio de Janerio in June 1992. It came into force in 21 March 1994. As of February 1995, 119 countries had ratified this convention.

Pacific island countries who have signed and ratified the Framework Convention on Climate Change (to date) are:

Cook Islands

Federated States of Micronesia

Papua New Guinea

Solomon Islands

Western Samoa

Fiji

Kiribati

Tuvalu

Vanuatu

Marshall Islands

Nauru

Stop Press!

In the last issue of Environment
Newsletter, we reported on a
research programme that uses sea
turtles tagged with satellite
transmitters to study their migration
patterns from their breeding area on
Rose Atoll in American Samoa.

Peter Craig from A. Samoa reports that this year the tagged green turtle swam 1250 miles to **French Polynesia**, in 36 days!

Did you guess its destination correctly? **Tela Malaga** in American Samoa did, and won USD 250.00 as well!

The Editor

page 5

South West Pacific is Warming

The South West Pacific has been warming since early this century. This is one conclusion from a paper presented to the Greenhouse 94 Conference in Wellington, NZ, in October 1994.

Ten researchers from Australia and NZ, have found that the region's air temperature has risen 0.4-0.7oC since 1951, and most markedly since 1975. Sea surface temperatures have shown a similar rise.

The group's spokesman, Dr Neville Nicholls from Australia, said that this does not confirm global warming, as "(the changes) may reflect natural climate variability. However, the observed changes are not inconsistent with the pattern of climate change expected from an enhanced greenhouse effect", said Dr Nicholls.

Australia-South Pacific Newsletter, 1/11/94.

Loggers to Provide Services

Logging companies operating in Solomon Islands will be required to provide social services in their areas of operation under a proposed new law, according to Solomon Islands' Forest Secretary, John Naitoro.

He said that under a new policy loggers would be required to fund the building of health clinics, schools, water sapply lines, roads and reafforestation projects as part of compensation to local landowners, in return for access to indigenous forests.

AFP, Honiara, 7/12/94.

Let our turtle family live!

☞ page 6

Small Islands Clash with USA

In a surprise move, USA has sought to delete references to small island states in key documents for the World Summit for Social Development, in Copenhagen, Denmark, on 6-12 March 1995.

Islands state representatives, headed by Fiji and Jamaica, led a lengthy debate that resulted in USA backing down from its proposal. A US delegate had proposed to delete a paragraph that recognised the special needs of small island states through technical and financial cooperation, from the commitments section of the negotiating documents.

Fiji UN Mission Press Release, 19/1/95.

Leading NGOs Disappointed with Climate Negotiations

International NGOs expressed disappointment with the results of the last preparatory conference before the Berlin Climate Summit.

Representatives of Greenpeace, WWF and the Climate Action Network criticised OECD countries, particularly the EU and USA, for their lack of commitment to agree to stabilise carbon dioxide emissions by the end of this century.

Rising levels of carbon dioxide, which is a major cause of accelerated global warming, originates mostly from OECD countries. These levels are a major cause of concern for many low-lying Pacific island countries.

Climate Action Network press release,

page 9 🖝

Let our turtle family live!

The Pacific Environment Information Network:

A regional initiative is now being developed to improve the way environmental information is disseminated around the Pacific islands - from regional organisations such as SPREP through to Pacific island communities.

An initial co-operative effort by SPREP, UNESCO and SPC has assessed how environmental information is currently obtained by national bodies, and how it is then processed and disseminated, as well as how local knowledge is gathered and stored for future use.

Two survey missions visited 11 countries in Melanesia, Micronesia and Polynesia (see box on page 9), and had detailed discussions with government agencies, NGOs, the local media and people in general on how they received and disseminated environmental information, and what was necessary to improve this information flow.

It was found that information was not flowing effectively to the media and the public. This poor flow was often due to insufficient training and resources in key national agencies. Insufficient systems for information storage, poor accessing and selection of relevant information (where available), and little or no interpretation of this information into simple English or translation into local languages were also evident.

Corporatisation of government media offices has affected the use of the mass media, especially where environment agencies and NGOs could no longer afford to pay for newspaper space or radio or television airtime.

It was also found that a basic regional environmental network existed-from SPREP to member countries through SPREP's focal points-but that much could be done to improve the onward flow of relevant information to the media and environmental information users, including NGOs. There were also existing national information networks that could be used to spread environmental messages within a country, but these needed to be provided with appropriate materials.

A Regional Information Initiative

All countries surveyed, except Nauru, have completed National Environment Management Strategies (NEMS), all of which also emphasised the need for the improved dissemination of environmental information. Thus, national governments and NGOs who were involved in the NEMS process considered this an important concern.

A technical meeting of information specialists met in Apia in February 1995 to discuss the findings of the survey missions. These experts in media, libraries and information systems developed the basis for a project proposal to establish and develop the Pacific Environmental Information Network, to be based at SPREP.

The meeting recommended establishing national information centres for the environment that would improve the collection and distribution of environmental information. especially in the amount and quality of information reaching the media and the general public. It was also recommended that the new SPREP Library and Information Centre receive some resources to improve its distribution of environ-

mental information to member countries.

A related regional information project, the Pacific Sustainable Development Networking Programme (PSDNP), actively participated in the meeting to ensure that the activities of the PSDNP and the Pacific Environment Information Network would complement each other.

Indeed, SPREP is already actively involved with the PSDNP by hosting the Pactok e-mail hub for Western Samoa, and by assisting in upcoming PSDNP training workshops in 1995.

The SPC Regional Media Centre will also be involved by providing media and communications training for participating organisations.

The technical missions and the follow-up meeting were organised by UNESCO's Regional Office in Apia, Western Samoa, and funded by UNDP. The missions involved representatives from SPREP's Environmental Education, Information and Co-ordination Division. UNESCO's Communication Programme, and SPC's Regional Media Centre (based in Suva).

For more information on the missions and the inter-agency meeting, contact:

Mr Jim Bentley Communication Adviser, UNESCO Office for the Pacific States, Private Mail Bag.

Apia, Western Samoa. Fax: (685) 22 253.

For more information on the proposed Pacific Environmental Information Network, contact Wesley Ward, Information and Publications Officer, or Lucas Dosung, Library and Information Centre Co-ordinator, at SPREP.

Finance Ministers Commend New Forest

Forum Finance Ministers recently endorsed the new draft Code of Conduct on Forestry, which is based on the twin concerns of the need for sustainable forestry practices and for maximum returns for the region's timber.

The Ministers also welcomed the outcomes of recent High Level discussions between Forum member countries and distant water fishing nations, and urged greater efforts towards practical ways to ensure sustainablility and greater returns to island countries for exploiting migrating fisheries.

Ozone Still Declining

A comprehensive report by nearly 300 scientists from 35 countries stated that, although international efforts are beginning to take effect, the vital ozone layer above the earth's surface is still growing thin-

World Climate Newsletter, 12/94-1/95.

New "Enviro-Friendly" COTS Control

Recent research in Australia has revealed a more "environmentallyfriendly" method of controlling the destructive crown-of-thorns starfish (COTS).

Researchers from the Great Barrier Reef Marine Park Authority have shown that sodium bisulphate, or dry acid, is an effective chemical agent for locally controlling numbers of the starfish.

This recommendation replaces the previously "unfriendly" chemical control, copper sulphate.

Reef Research, 4:4, 12/94.

page 11 -

Pacific Island Countries Join the "Information Super-Highway"

R ecent workshops in Fiji, Vanuatu and Western Samoa signaled the entry of some Pacific island countries onto the so-called "information super-highway".

These workshops established local electronic mail networks using the Pactok system, with users from national government and regional agencies, NGOs and private businesses.

At the opening of the workshop in Western Samoa, the local UNDP Resident Representative, Mr Tony Patten, stated that the Pacific Sustainable Development Networking Programme (PSDNP) sought to improve the access by Pacific islanders to up-to-date and relevant information for making better informed decisions. (See PSDNP article this page for more details).

Establishing national Pactok networks is one way the PSDNP will improve information access in the region. Participating organisations will form the core of national networks of users, who will be linked through their computers to other Pactok users elsewhere in the Pacific and Asia, and globally through the associated *Internet* system.

Local users can send and receive messages by electronic mail, transfer computer files and documents, and participate in electronic conferences. They can use existing computers and telephone lines, and a modem, to connect to other computers in the network. These users will also form a local user group, which will seek to establish and expand the national network, and to decide on policies for the future funding of the national network.

The PSDNP, based at SPC's Suva office, provided trainers for the workshop. Mr Samuela Sesega, PSDNP Co-ordinator, said that this was the first of a series of national training workshops involving national user groups. He was assisted by Mr Ken Fakamura, the Programme's Training / Information Officer.

Mr Sam Sesega PSDNP Co-ordinator, SPC

Photo: SPREP

SPREP is collaborating with SPC to carry out PSDNP activities in Western Samoa, and hosts the local SDN Officer. Ms Wanda Ieremia, who manages the day-to-day activities of the PSDNP and the Western Samoan node computer for Pactok.

SPREP's Capacity 21 Project, led by Ms Neva Wendt, is also working very closely with the PSDNP to encourage sustainable development in Pacific island countries.

This programme originated from a UNDP-funded initiative that was adapted by a regional steering committee for use in the Pacific islands region. The Asia Foundation, a nonprofit organisation with a regional office in Suva, Fiji, also funded Mr Rob Garnsey from Pactok to provide technical assistance and training in the workshop.

What is the Sustainable Development Network?

The Pacific Sustainable Development Networking Programme (PSDNP) is part of a global UNDP-funded programme aiming to establish worldwide information networks to promote sustainable development. It is implemented in the Pacific islands by the South Pacific Commission, based in Suva, Fiji.

What is the Role of the PSDNP?

PSDNP's role is to promote sustainable development and to support all national and regional efforts aimed at achieving this. PSDNP will do this by:

☑ assisting key organisations and groups to access relevant regional and global information;

- encouraging the sharing of experiences and traditional knowledge among Pacific island countries;
- enhancing the capacities of local community groups, NGOs and government agencies to repackage information aimed at communities; and,
- fostering participatory decision making by all elements in society.

How does PSDNP Work?

PSDNP's main activities are:

Inking various groups involved in sustainable development, using computers and telephone lines; and, training NGOs and government agencies in information repackaging skills for material destined for local communities.

The target groups include community groups, national NGOs, national government agencies, private business and regional organisations.

PSDNP uses two communications

PSDNP uses two communications systems:

- PEACESAT, a satellite-based telecommunications system connecting over 40 sites throughout the Pacific islands; and,
- Pactok, a low-cost electronic mail network which uses normal telephone lines.

Director Opens New SPREP Library

S PREP's information services to the Pacific islands region have improved dramatically with the official opening of the SPREP Library and Information Centre on 28 February 1995.

While opening the Centre, SPREP's Director, Dr Vili Fuavao, stated that this opening was a significant event as the Pacific islands region now had its own information resources to address the region's and the world's environmental concerns.

The Centre will collect, process and arrange information on books, journals, extension materials, maps and videos to build a database. People in the region will be able to search this database to request information held at the Centre.

The SPREP Library and Information Centre arrived at SPREP's headquarters in Apia in January 1992, in nearly one hundred boxes from SPC, New Caledonia. Some volunteers initially worked to place some books on shelves. However, no formal work commenced until August 1993 when a USP consultant, funded by the New Zealand

government, advised SPREP on how best to establish and manage the Centre.

Work on the Library and Information Centre began in earnest in April/May 1994, when SPREP recruited a Library and Information Centre Co-ordinator and a Senior Library Assistant with further funding from New Zealand. Work continued on unpacking and cataloguing books from Noumea, expanding the library's space, building shelves and establishing databases until the opening day.

The Centre now houses over 150 journal titles, 1,500 monographs and 150 audio visual materials such as video cassettes, slide-tape sets, audio tapes and tape scripts. All cataloguing, storage and retrieval of records is completed on INMAGIC-PLUS software.

As part of SPREP's mandate under the SPREP Action Plan, the Library and Information Centre will rapidly develop into the main depositary for the region's environmental information, as well as becoming the region's major environmental information distribution centre.

Services Offered by the SPREP Library and Information Centre are:

- monograph loans
- apamphlet loans
- periodicals services
- o video and audio cassette loans
- database searches and document delivery
- electronic mail

For more information on the services offered by the Centre, contact the:

Library and Information Centre Co-ordinator

TOGA Project Finishes

The 10-year Tropical Ocean-Global Atmosphere (TOGA) programme completed its activities in December 1994. TOGA focused on the El Niño/Southern Oscillation (ENSO) events that so drastically affect climate patterns in the Pacific region and elsewhere.

The TOGA programme has achieved outstanding success in forecasting changes in the ENSO a season or more in advance. An associated experiment in the warm water pool of the western Pacific Ocean has provided data that will be "a source of scientific advances in understanding air-sea interactions for years to come".

The results of TOGA will be reviewed at a conference hosted by Australia in early April, 1995.

World Climate News, no. 6, 1/95.

Three New Officers for Capacity 21 Project

R egional organisations are always seeking to improve the establishment and management of their national projects in member countries.

SPREP's new Capacity 21 Project is tackling this problem "head-on" by appointing three local officers to oversee the Project's activities in six SPREP member countries - Cook Islands, FSM, Kiribati, Solomon Islands, Vanuatu and Western Samoa.

These local officers met in March in Apia, Western Samoa, to familiarise themselves with SPREP's current activities and the resources available to them. Ms Neva Wendt, the Project's Manager, said that this will improve their effectiveness in implementing local activities in the Capacity 21 Project, as well as in assisting with other SPREP projects and activities in their countries.

The officers met with various SPREP staff during their meeting, and also developed workplans for the coming year. They left with a keener appreciation of what SPREP is and what it does, and so will be more effective in-country representatives of SPREP.

Each officer is responsible for two countries: Mr O'Kean Ehmes, based in Pohnpei, covers FSM, and Kiribati; Ms Sarah Naupa, based in Port Vila, is responsible for Vanuatu and Solomon Islands; and Mr Vai Aiavao, based in Apia, works in Western Samoa and Cook Islands.

The Capacity 21 Project is aimed at institution building in government and non-government agencies; improving awareness of sustainable development in key national decision makers; and improving the capacity of local custom landowners to sustainably manage their resources. These officers will carry out many local activities to achieve these aims.

The Project is funded by UNDP and implemented by SPREP. It also works closely with the related Pacific Sustainable Development Networking Programme, based at SPC in Suva, Fiji.

Ed.: The next issue of the

Environment Newsletter will include
profiles of these officers. Also see
Environment Newsletter no. 38 for
more details on the Capacity 21
Project, or contact Ms Neva Wendt,
Project Manager (Capacity 21), at
SPREP.

Outreach Begins for Population Project

Taiamoni Tongamoa and Beau Henry Merto Population and Environment Project

PREP's Population and Environment project has commenced its outreach programme for the coming year with a national training workshop in Honiara, Solomon Islands.

Invited organisations for the Solomon Islands workshop included:

Development Services Exchange Environment Division, Ministry of Forests and Environment Greenpeace Integrated Human Development Programme Kaipito Farmer's Community Kasika Community Project Kolomola Community, Solomon Islands Development Trust

Solomon Islands Planned Parenthood

Solomon Trust The Nature Conservancy Village Education Programme World Vision International

Community development workers from the country's eleven provinces participated in a five-day workshop on "Integrating Population into Envionmental Management

for Sustainable Development".

Government agencies, NGOs and local community organisations (see box) provided over thirty participants, who worked closely together in all workshop activities.

The course addressed problems in village development because of pressures on the local environment from changing populations. Participatory approaches in community development were used during the workshop to show techniques that could be used in the villages.

The course ran from 12-17 February 1995, funded by UNFPA. It is part of an on-going series of workshops for sixteen SPREP member countries which suffer from the combined pressures of increasing populations and environmental stress.

Participatory activities were an important part of the Solomons workshop.

Funding:

Support for Climate Change Studies US Country Studies Program

Donor: USA

Purpose:

To provide technical and financial support to help developing countries prepare studies addressing climate climate.

Assistance is provided to:

- 1. develop an inventory of net national emissions of greenhouse gases;
- 2. assess vulnerabilities to climate
- 3. evaluate options to mitigate and adapt to climate change; and,
- 4. support efforts to develop and implement national policies and measures to deal with longterm climate changes.

For more information:

US Country Studies Management Team (PO 63) 1000 Independence Ave, SW Washington, DC. 20585.

Radio Training for Solomons

Gisa Gaufa Salesa Environmental Education Officer

welve participants from NGOs, church groups, the media and government agencies received practical training in radio production at a recent national workshop in Honiara, Solomon Islands.

The enormous output from the five-day workshop - five radio talks, fifteen "spots" and a radio drama showed the dedication of participants and the practical nature of the course.

David Palapu, Programme Director at the Solomon Islands Broadcast Corporation was the chief trainer. He was assisted by SPREP's local education co-ordinator, Gerry

Whewell, and Moses Biliki, the Chief Environment and Conservation Officer from the Ministry of Forests, Environment and Conservation.

The material produced in the workshop will be used for the second phase of a national Environmental Awareness campaign. This will be run over national radio stations during 1995, particularly in February to April. These materials will also be used during the year to support various awareness seminars and workshops run by the Environment Department and NGOs.

This workshop follows a similar activity in November 1994, where radio material was produced and then broadcasted by the Broadcasting Corporation.

Books, videos, slides and other materials from SPREP and other environmental organisations in the Pacific islands.

Fiji's New Waste Strategy

Development, population growth and urbanisation in Fiji has resulted in serious pollution and waste management problems that threaten human health, water and soil quality and fragile island ecosystems.

To address this rapidly growing problem, Fiji developed a National Pollution Prevention, Waste Minimisation and Waste Management Strategy during a national workshop in September 1994. This is outlined in the Proceedings of the Workshop.

With wide representation from government agencies, NGOs and the business sector, it seeks to practically address the problems with a "Declaration of Co-operation" and a "Proposed Waste Minimisation and Management Stategy for Fiji". The Proceedings also contain a Summary Workshop Report and copies of the papers presented at the Workshop.

For more information on the Strategy and the Workshop, contact: Sefania Nawadra Department of Environment PO Box 2131 Government Buildings SUVA, Fiji

Fax: (679)

For more information on any SPREP publications, contact: The Director, SPREP PO Box 240 APIA, Western Samoa Fax: (685) 20 231

New SPREP Publications

The SPREP Meeting is the important annual conference for this organisation. The report of the Seventh SPREP Meeting in Tarawa. Kiribati, in October 1994, contains the major decisions of its member countries for SPREP for 1995.

Two important documents endorsed by this SPREP Meeting were the 1994-96 Corporate Plan, and the Action Strategy for Nature Conservation in the South Pacific Region 1994-98. Both are important if you wish to find out more on what SPREP stands for and does, and how it carries out its mandate.

SPREP continues to expand its technical publishing in the SPREP Reports and Studies (SRS) series with Palolo Deep National Marine Reserve: a Survey, Inventory and Information Report (SRS 84), by E. Lovell and F. Toloa. With numerous photos and diagrams, it is a useful example of how to complete a detailed inventory of a marine reserve using local staff and facilities.

SPREP also has an important role in providing relevant technical information for a variety of groups, some of whom require this information in a simpler format. The Fact Sheet series provides much of this information. Four new fact sheets in this series are on the SPREP Convention (no. 12/4) and the Apia Convention (no. 12/5) in the Environmental Law series, and a description of the South Pacific Sea Level and Climate Monitoring Project (no. 13/1) and its equipment, the SEAFRAME Monitoring Station (no. 13/2).

Agencies and individuals requiring more information on SPREP's Population and Environment Project can now order a colourful 4-page pamphlet that clearly

lays out the environmental problems associated with changing human populations in the region, and how this project will address some of these problems.

Sustainable Development or Malignant Growth?

'Atu Emberson-Bain, well-known social researcher in the Pacific islands, has edited a provocative book by Pacific women that challenges accepted perspectives on "development" in the Pacific islands.

Sustainable Development or Malignant Growth? has 26 chapters on a wide number of topics, including the declining Pacific environment and over-using natural resources. Contributors are drawn from many fields, providing new and interesting critical perspectives on resource management, fishing, population growth and wider environmental issues.

Some articles also question the fundamental assumptions that underlie current approaches to development in the region.

For more information, contact: Marama Publications Box 5151, Raiwaga SUVA Fiji

New Forests Newsletter

Soltrust, a community development NGO based in Honiara, Solomon Islands, has commenced publishing a new newsletter on sustainable forestry - Sol-Tree Nius.

It promotes the aims of Soltrust's Ecoforestry Project, which look to promote sustainable forestry practices while maintaining national economic growth and social development.

The newsletter itself promotes sustainable practices by also providing advertising space for local businesses.

Training Courses and Workshops

International Environmental Management Seminar

Where? Halifax, Canada When? 25/5 - 16/6/95

Who for? Senior managers in business, government, educational institutions and NGOs.

Aims: Participants will receive an intense and practical treatment of the principles, approaches and tools of environmental management in attaining sustainable development.

Last date for application: 3/4/95

For more information:

Seminar Director, IEMS '95 School for Res. and Environ. Studies Dalhousie University HALIFAX, Canada.

Forestry Planning and Management

Where? Gympie and Canberra, Australia

When? 16/10 - 8/12/95

Who for? Middle and senior level forest managers, and rural development workers in community forestry.

Aims: Course participants will gain knowledge and skills in:

- identifying, appraising and managing forestry projects, including natural forests, community forests and plantations;
- planning and managing large scale plantations and native forests;
- using computers for resource planning, and for financial and economic analysis;
- EIA and environmental protection in forest planning; and,
- methods to encourage people participation in forestry projects.

The Last Word ...

W elcome to 1995 and this Environment Newsletter, where we commence an important year for SPREP and it member countries. The Year of the the Sea Turtle.

There have already been a number of activities around the region, including the official launch of this vital campaign by SPREP's Director, Dr Fuavao. Read his opening address for the regional launch in From the Director's Desk on page 3.

Fiji has already shown the way for the Pacific islands with a oneyear ban on all commercial sales of sea turtles and turtle products. If you have been near the fish market in Suva in the past, you know why. Read more on the ban on page 2.

This campaign is also a historic occasion for SPREP - it is the first time that SPREP, its member governments and local community groups have co-operated in a major regional campaign. Read more on this campaign on page 1.

There have been a number of initiatives in recent years to improve the dissemination of environmental information around the Pacific islands. Read more on these projects in this issue.

We have our usual round-up of regional and national activities, in this issue from Solomon Islands and Niue. We also review new environment and development publications in *Environment Book Review*, and you can scan this year's regional and national meetings in our *Meetings* calendar.

Finally, I urge you to take part in the events carried out in your country for the Year of the Sea Turtle. Support the call for bans on the commercial exploitation of our fast disappearing turtles. Let Our Turtle Family Live!

Tofa soifua, Wesley Ward, Editor.
